## **DETAILED ACTION**

### ***Response to Amendment***

1. Applicant's reply, filed 27 June 2006, has been received and entered.

Accordingly, claims 1, 4, 10, 16, and 20 have been amended. Claims 2, 3, and 15 have been cancelled. Claims 21 and 22 have been added. Thus, claims 1, 4-14, and 16-22 are currently pending in this application.

### ***Allowable Subject Matter***

2. Claims 1, 4-14, and 16-22 are allowed.
3. The following is an examiner's statement of reasons for allowance:

With regards to independent claim 1 and dependent claims 4-9, while aspects of the invention can be found in the prior art, the prior art does not teach or suggest the limitation of a controller driving the thermoelectric cooler and the heater to provide a nonuniform temperature profile along the detector array, as recited in independent claim 1. Yoshioka discloses a parabolic temperature profile (see Figure 9), but cites this as a negative limitation of prior art temperature stabilization systems (page 4 of the translation, lines 4-15). The prior art of record emphasizes attainment of a uniform temperature profile for the detector array. As such, applicant's disclosure represents a novel and nonobvious improvement over the prior art. Accordingly, claims 1 and 4-9 are allowed.

Art Unit: 2884

With regards to independent claim 10 and dependent claims 11-14 and 21, while aspects of the invention can be found in the prior art, the prior art does not teach or suggest a method for maintaining a nonuniform temperature profile along a detector array in a CT scanning operation by commanding a thermoelectric cooler and a heater, as recited in independent claim 10. The prior art of record emphasizes attainment of a uniform temperature profile for the detector array. As such, applicant's disclosure represents a novel and nonobvious improvement over the prior art. Accordingly, claims 10-14 and 21 are allowed.

With regards to independent claim 16 and dependent claims 17-20 and 22, while aspects of the invention can be found in the prior art, the prior art does not teach or suggest the limitation of a controller driving the thermoelectric cooler and the heater to maintain a nonuniform temperature profile along the detector array, as recited in independent claim 16. The prior art of record emphasizes attainment of a uniform temperature profile for the detector array. As such, applicant's disclosure represents a novel and nonobvious improvement over the prior art. Accordingly, claims 16-20 and 22 are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 2884
